Dear Reader,

Despite economic upswings and downturns, we can look back on steady growth of the Flexible Intermediate Bulk Container (FIBC) market in Europe. Indeed we look forward to a continuation of this trend thanks to the ingenuity and versatility of FIBC as a product. As the number of industries employing FIBC increases, the variety of solutions to address the diverse needs has grown. It is part of EFIBCA's mission as the trade association of the FIBC industry in Europe to aid users in making informed decisions and to promote the safe use of FIBC, whatever the application.

EFIBCA has a long history of championing the customer requirement for qualified information. Today, EFIBCA and its Members aim to reach the end user through practical tools such as the EFIBCA booklet "Questions and Answers Concerning the Use of Flexible Bulk Containers (FIBC)", which covers frequently asked questions. Seeing the need for a detailed handbook, EFIBCA has recently published the "FIBC User Guide: Guide for the Safe Use of Flexible Intermediate Bulk Containers," which was written together with EFIBCA Members and subject matter experts. It provides users with all must-to-know information about FIBC like construction types, handling and disposal as well as specific knowledge e.g. on FIBCs for foodstuff or dangerous goods.

EFIBCA and its Members are aware that customers expect not only high quality products and services from suppliers, but also corporate environmental and ethical management. The EFIBCA-Q Quality Pledge and the EFIBCA Code of Conduct are two corresponding programmes developed by EFIBCA for its members to promote these topics of growing importance for doing business in Europe.

These and a range of other activities shown on the next pages demonstrate how EFIBCA is taking an active lead in the industry. EFIBCA is hereby building trust and a reputation to the benefit of EFIBCA's member companies, FIBC users and the FIBC industry as a whole.

Thanks to all members for the continued support provided to EFIBCA. We welcome further FIBC manufacturers and distributors to join us and speak with one voice in representing the interests of the FIBC industry in Europe.

Sincerely yours,

A blue ink handwritten signature, appearing to be 'Roelof Veld', written in a cursive style.

Roelof Veld, EFIBCA President

EFIBCA Activity Highlights

Meetings

EFIBCA Annual Meetings

Every year's highlight is the EFIBCA Annual Meeting where all members meet to exchange on current market topics and discuss the association's priority activities. The meeting's social event provides a forum for networking and exchange in a relaxed and informal atmosphere.

EFIBCA Open Meetings and Dinner Receptions

EFIBCA's Open Meetings and Dinner Receptions occur alternately every 1.5 years and anyone working in the FIBC industry is welcome to attend. At Open Meetings, experts give insights into important issues affecting the industry, ranging from new European legislation, to market overviews, safety and quality, and corporate social responsibility. EFIBCA Dinner Receptions are conceived as the branch's regular kick-off to the packaging trade fair interpack. Both are perfect platforms for information exchange and networking across the FIBC industry.

Initiatives

EFIBCA Code of Conduct

More and more customers expect a clear and explicit commitment towards worker rights and ethical business conduct from their suppliers. EFIBCA's code of conduct is a voluntary agreement through which EFIBCA members bind themselves to observe globally recognized ethical standards as well as competition and antitrust law. The EFIBCA Code of Conduct is thus a meaningful way of building trust in customer relations.

EFIBCA-Q Quality Pledge

The EFIBCA-Q Quality Pledge aims to raise awareness amongst users of FIBCs about quality and safety standards relevant for different types of FIBCs. FIBC manufacturers and the distributors signing pledge commit to comply with all specifications listed in the EFIBCA-Q Quality Criteria. Users of FIBC are encouraged to engage with their FIBC supplier on the EFIBCA-Q Quality Criteria and to include these criteria in their supplier audits.

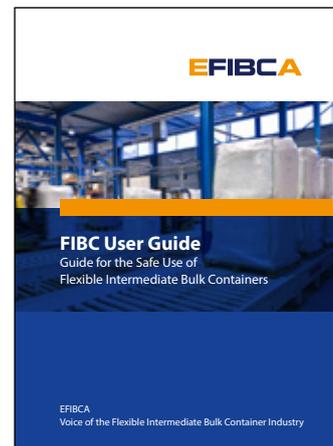

Scientific and Industry Studies

At the remit of its members, EFIBCA creates workgroups and commissions studies to address concerns affecting the industry. At a UV Resistance Workshop in 2014, EFIBCA members voted to commission a correlation study comparing actual weathering stress on FIBC over time to accelerated laboratory testing as required by ISO 21898. EFIBCA is funding the study which will deliver answers that can improve quality testing, increase safety and reduce risks. A team of EFIBCA members and external experts is overseeing the project.

Qualified Information on Flexible Intermediate Bulk Containers

The FIBC User Guide for the Safe Use of Flexible Intermediate Bulk Containers

This comprehensive handbook aims at informing the FIBC user in detail about design, safety, handling, transportation and storage. Furthermore, it gives up-to-date guidance on dangerous goods and food contact bags, correct marking, and end of life considerations for FIBCs.

Questions and Answers Concerning the Use of Flexible Intermediate Bulk Containers (FIBC)

This brochure is designed as a resource for end users of FIBC on the key safety relevant aspects for filling, emptying, transportation, stacking and storing of FIBCs. The brochure is available in print or as a download in English and translations into other languages is planned.

Technical Competence

EU Food Contact Regulation

The EU Food Contact Regulation (No 10/2011) unifies and revises all former EU provisions on plastic materials designed for food contact, including migration testing and written declarations of compliance across the packaging supply chain. EFIBCA helps its members to keep abreast of the rigorous regulation, e.g. through a guidance document and standard forms in several languages. Through its umbrella organization, EuPC, EFIBCA also offers its members participation in regulatory compliance training.

Transport of Dangerous Goods Regulation

EFIBCA holds a seat on the board of the International Confederation of Plastics Packaging Manufacturers (ICPP), which represents the interests of the global plastic packaging industry at the UN Committee of Experts on the Transport of Dangerous Goods, the responsible body for issuing the UN Recommendations on the Transport of Dangerous Goods, better known as the "Orange Book".

Service

EFIBCA Newsletter

EFIBCA issues a biannual newsletter that informs about new legislation, standards and technologies as well as FIBC market news. The FIBC calendar gives an overview on upcoming EFIBCA meetings and important international fairs and conferences.

FIBC Import Statistics

EFIBCA regularly compiles and publishes the FIBC import statistics. They inform about the value and volume of FIBC imports to the European Union and give a ranking of the top exporting countries to the EU.

EFIBCA Membership Certificates

EFIBCA issues annual membership certificates to all its members. Members are also listed on EFIBCA's homepage www.efibca.com.

Organisation

Council Members

Burckhardt of Switzerland AG

- EFIBCA member since 2012
- Representative at EFIBCA: CEO Theodor Burckhardt
- Products and services: Leading developer and manufacturer of pinned parts for fibrillation and perforation
- Location of head quarters and production sites: Basel (Switzerland)
- Markets: worldwide
- Number of employees: 40, agents in 50 countries
- Burckhardt of Switzerland AG was founded in 1941 and is specialized in the development and production of pinned and drilled precision parts as well as machines containing pinned parts. Our main areas of activity are fibrillating, perforating and pinned precision parts. We have recently upgraded our activity to include perforating services/toll perforation. It is our goal to improve customer's competitive position by applying our tailor-made solutions. A good example is the Burckhardt fibrillating system which can be mounted in most of the tape extrusion lines and for exchanging the fibrillation bars the roller does not have to be dismantled. For normal fibrillation we offer needle bars with a pin density from 4 – 70 needles/cm. Now, the latest development of the patented "Shark"-system enables customers to fibrillate elastic/multi-oriented tapes which could not be fibrillated until now.
- Website: www.burckhardt.com

Mr. Theodor Burckhardt, Burckhardt of Switzerland AG

Gabriel-Chemie Gesellschaft m.b.H.
